Gen.: Int.: In Clinical Rsch., Discovered (1909) that the Pulmonary Reflexes Through the Sympathetic System Take Place in the Central Cervical Segments of the Cord, Particularly the III, IVth and Vth, Causing Spasm of the Muscles of the Shoulder Girdle and the Crus and Central Tendon of the Diaphragm When the Disease in the Lung is Active, and Causing Degeneration of these Muscles When the Disease is Chronic; Also Degeneration of the Superficial Tissues in the Areas Supplied by these Same Cervical Segments, including the Soft Tissues of the Neck and Chest Above the Second Rib Anteriorly and the Spine of the Scapula Posteriorly; and Sensory Changes in these Areas; Also Showed that Parasympathetic Reflexes Take Place Through the Various Branches of the Vagus, and in the Vth, VIth and IXth Cranial Nerves; In 1909 Described the Ability to Delimit Organs Such as the Heart and Structures of Different Density Within the Chest by Light Touch Palpation, A Touch so Light that it Barely Indents the Skin; Described the Pleural Reflexes which Take Place Through the Intercostal Nerves; They Show as Tension in the Intercostal Muscles When the Disease is Active, and Degeneration of These Muscles and Other Intercostal Tissues, and Also of the Soft Tissues Covering the Area Involved in a Short Time After the Disease Has Been Present and Remains So Thereafter; The Threshold for Pain in These Nerves Is Lowered and They May Show Pain Any Time Thereafter Under Conditions of Stress Such as Overwork, Tiring, Worry, Menstruation, Weather Changes, or Anything That Lowers the Resistance of the Patient and Calls Upon Him for Special Response; These Reflexes are Especially Valuable Because the X-Rays May Not Give Any Indication of Former Pleurisy; in 1913, Described the Motor and Trophic Reflexes from the Kidney as shown in the Lumbar Muscles; in 1913, Offered a Classification of Symptoms of Tuberculosis According to Their Etiology; in 1946, Suggested a New Conception of the Respiratory Murmur, Namely, that it is caused by the Entire Respiratory Mechanism (Muscles, Bony Cage, Pulmonary Tissue, Bronchi, Air Cells, and the Air Current) Rather Than by the Air Current Passing Through the Larynx and into the Lower Respiratory Tract, Dilating the Bronchi and Air Cells as Suggested by Laennec and Beau. Special Int.: Pulmonary Tuberculosis; Its Immunological, Pathol. and Clinical Aspects; Also the Vegetative Nervous System.
